

8. There is a missing ref to a figure on page 42.

The reference should be to Figure 4.2 on page 42 of the QRA. Note that the figure showing topography as it applies to *ViewRisk* is different to a traditional topographical map. *ViewRisk* topography zones are defined on a map (i.e. the shaded triangular shape in Figure 4.2) and are given a mitigation efficacy. In the case of Shannon LNG, the *ViewRisk* topography component was defined to mitigate horizontal jet fires from the process area.
